AGIO ENDPOINT DETECTION & RESPONSE

powered by Cylance & AlienVault

Protecting your firm's data, reputation, and money is a top priority for the C-suite. We already know humans are your weakest link, which means the systems (i.e. endpoints) they use are next. Preventing threats at this common point of entry makes sense, but simply buying software and checking the box means nothing. Most firms struggle with how to configure, monitor, and manage endpoint technology to successfully defend against bad actors. These tools end up becoming noise for internal IT teams, and if no one is dedicated to responding to the SIEM, then what's the point? Your systems aren't any safer.

Agio Endpoint Detection & Response is an extra layer of protection for our Managed Detection & Response clients. We combine the most sophisticated endpoint detection technology with our 24x7x365 SOC to hunt, investigate, and eradicate attacks before they damage your business. We go beyond no missed alerts and proactively recommend changes to keep your environment more secure, always. Specifically our service includes:

- Zero-Day Prevention
- 24x7x365 Detection & Response
- Threat Hunting
- Industry-Specific Configuration Baseline
- Script Management
- USB Mass Storage Management

WHAT YOU GET

Zero-Day Prevention
Designed to stop any malicious application before it executes, we use artificial intelligence to prevent known and zero-day payloads from executing. This is coupled with memory exploitation detection and prevention to protect against advanced fileless attacks, which standard antivirus tools usually miss.

24x7x365 Detection & Response

Having the tools in place to alert you of a potential attack is step 1; step 2 is about responding to those events in a timely manner. The Home Depot attack is a great example of an alert that went to a team who was too overwhelmed to investigate. We take care of that for you with our trained and certified cybersecurity analysts, who execute proactive and preventive activities based on ongoing data gathering. Monthly posture reporting identifies traffic trends, attacks, anomalies, etc., and keeps you on the leading edge with actionable recommendations.

Threat Hunting

Agio takes cybersecurity to a level beyond scanning, employing cutting edge threat-hunting tools for enterprise-wide protection against known and unknown evasion techniques. By aggregating data from each agent and logging all of the activity on your endpoints, our analysts identify and stop active threats. Our systems also detect any active footholds in the environment within minutes with instructions for containment and eradication, reducing the dwell time and decreasing business impact.

Industry-Specific Configuration Baseline

Our focus on the alternative investment space gives us a unique understanding of environments like yours, with similar configurations and applications. With this experience, we know the ins and outs of each application to ensure they're performing as expected, maximizing security and minimizing disruption.

Script Management

Malicious code is taking over in new forms and one common usage is leveraging good applications for bad behaviors. Agio can lock down common scripting tools, such as PowerShell, to prevent bad actors from executing script-based attacks, reducing the attack surface and making it harder for hackers to access your environment.

USB Mass Storage Management

USB lockout is a common practice and recommendation for most firms, but it's often overlooked. Agio Endpoint Detection & Response can limit access to only known-good device types, enabling an additional layer of protection for cases where USB is necessary.

WHY AGIO?

#OneAgio

When you select Agio, you're investing in a relationship with everyone who's a part of this firm. Our teams operate in a symbiotic relationship, based on deposits and withdrawals, that creates a vehicle for delivering more than just service. We deliver an experience that reaffirms to our clients we've got them covered. From clean, concise implementations; to consistent support backed by automation and tools that work the way they're supposed to; to value-add reporting; to accurate, timely invoicing; and content on the latest IT and cybersecurity trends, we bring the full breadth and depth of our talent to bear. We deliver #OneAgio.
